

Extension of functionality of the telephone menu and incoming SMS*

(From BLUETOUCH® software version 1.06)

Phonebook search function

From software version 1.06 BLUETOUCH® offers a new and comfortable search function for the paired mobile phone.

Via the *key telephone menu*, which is additionally assigned with *redialing*, (redial function does not exist anymore in the telephone menu), you reach the telephone menu.

- Press *key telephone menu*.
- Press *key phonebook search*.
- Now enter the first letters of the searched contact. The digits on the upper right part of the touch screen show the limited quantity of contacts. (The search function is incremental, every added letter reduces the length of the list of results)
- Press *key list of results* to find all your searched contacts. Now you can dial the number you need.

! The new search function for phonebook contacts searches for the beginning letters of words, re. prenames and surnames which are divided with a comma, blank or tag.

Example:

When entering Wl the search function finds Winter, Max and also Summer, Willy.

Notification of incoming SMS*

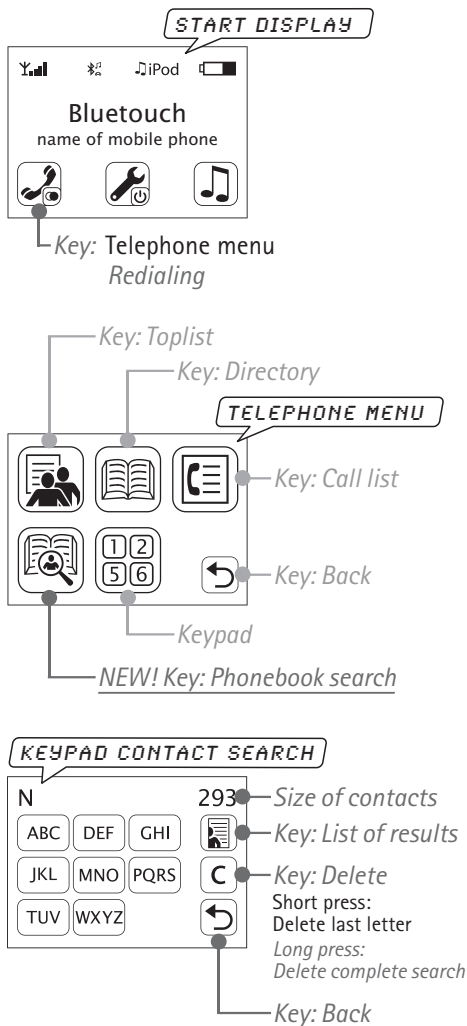

BLUETOUCH® shows a message - from software version 1.06 - that SMS on the paired mobile phone came in. A pop-up screen appears showing that SMS arrived.

- Press *back* to return to the last screen.

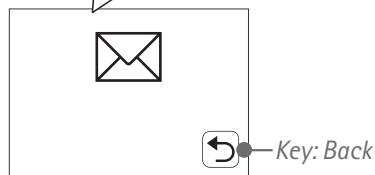

! IMPORTANT!

Road safety is the highest priority!
That is why the SMS is not seen in writing on the touch screen.

Only use your mobile phone when you do not participate in traffic and only than study your incoming SMS.

POP-UP SCREEN SMS NOTIFICATION

*The notification of incoming SMS is mobile phone dependent.
